About Good Energies

Introduction

Goals and Approach

Building Green: Costs, Benefits, and Potential

Part 1: Costs and Benefits of Green Building

1.1 Methodology

1.2 The Cost of Building Green

1.3 Energy-Use Reductions

1.4 Advanced Energy-Use Reductions

1.5 Water-Related Savings

1.6 Green Affordable Housing: Enterprise's Green Communities

1.7 Health and Productivity Benefits of Green Buildings

1.8 Green Health Care: Assessing Costs and Benefits

1.9 Employment Benefits of Green Buildings

1.10 Property Benefits of Building Green

1.11 Net Financial Impacts of Green Buildings for Owners and Occupants

Part 2: Costs and Benefits of Green Community Design

- 2.1 What is a Green Community?
- 2.2 Setting the Stage for Sustainable Urbanism
- 2.3 Financial Impacts of Green Community Design
- 2.4 Transportation and Health Impacts of Green Community Design
- 2.5 Property Value and Market Impacts
- 2.6 The Market Rediscovered Walkable Urbanism
- 2.7 Social Impacts of Green Communities
- 2.8 Cost Savings in Ecologically Designed Conservation Developments
- 2.9 International Green Building
- 2.10 Financial Impact of Green Communities

Part 3: Communities of Faith Building Green

- 3.1 Faith Groups in the Green Vanguard
- 3.2 Methodology and Findings
- 3.3 Motivation
- 3.4 Impact of Green Buildings in Faith Communities
- 3.5 Financial Stewardship
- 3.6 Conclusion

Part 4: Green Design, Climate Change, and the Economy: Potential Impacts in the United States

- 4.1 Energy Consumption
- 4.2 Renewable Energy
- 4.3 Carbon Dioxide Emissions
- 4.4 Financial Impact

Conclusion: Realizing the Value of Green Buildings and Communities

Perspective 1A: Architect Bob Fox on the Bank of America Tower at One Bryant Park

Perspective 1B: Water-Saving Strategies: Oregon Health Sciences University Center for Healthy and Healing

Perspective 1C: Birth of the Green Branch Bank

Perspective 1D: Green Building as Corporate Social Responsibility

Perspective 1E: Investing in Brownfields

Perspective 1F: Measuring Consumer Demand for Green Homes

Perspective 2A: Monitoring Performance at the LEED Platinum Center for Neighborhood Technology

Perspective 2B: A Greener Economic Recovery

Perspective 2C: Green Buildings in China

Appendixes

Appendix A: Data-Collection Methodology

Appendix B: Source List

Appendix C: Green Buildings Data Set

Appendix D: Comparison of Data Set to LEED-New Construction Buildings

Appendix E: Baselines Used in Cost and Benefits Estimates

Appendix F: Issues in Researching the Cost of Green Building

Appendix G: Cost of Energy-Efficiency and Renewable-energy Measures

Appendix H: Energy Use Baselines and Standards

Appendix I: Verifying the Energy Performance of LEED Buildings

Appendix J: Assumptions Used for Calculations of Water Savings

Appendix K: Assumptions Used in the Modeling of Health Benefits

Appendix L: Types of Green Community

Appendix M: Green Building Survey Instrument

Appendix N: Assumptions
