

Design/Science/Planning (DSP) is a book series for studies on planning or design using a scientific approach. The series explores reality-based scientific approaches to design, architecture and urban planning. This way, DSP aims to contribute to the development of both empirical-scientific knowledge and practical-scientific knowledge in these fields, as well as assessing how this knowledge is applied in practice.

This focus on design and planning is characteristic for Delft, and DSP aims to profile studies undertaken on this subject. The series is open to (edited) dissertations and post-phd work.

DSP is an initiative of the Faculty of Architecture of the Technical University of Delft, The Netherlands.

For more information, see also the website of the series <http://dsp.technepress.nl>

BOOKS IN DSP

Changing Contexts in Urban Regeneration — Paul Stouten (2010)

Urban Networks—Network Urbanism
Gabriel Dupuy (2008)

The Challenge of Social Innovation in Urban Revitalization — *edited by* Paul Drewe, Juan Luis Klein and Edward Hulsbergen (2008)

Shifting Sense in Spatial Planning — *edited by* Edward Hulsbergen, Ina Klaasen and Iwan Kriens (2005)

Principles of Urban Structure — Nikos Salingaros (2005)

ICT-Related Transformations in Latin American Metropolises — Ana Maria Fernandez-Maldonado (2004)

Information Processes in Design — John Restrepo (2004)

Knowledge-Based Design — Ina Klaasen (2004)

EDITORIAL BOARD

Professor Dr. Paul Drewe

Faculty of Architecture, Technical University Delft, The Netherlands

Professor Dr. J.J. Jacobs

Faculty of industrial Engineering, Technical University Delft, The Netherlands

Dr. Tiiu Poldma

Faculty of Environmental Planning, University of Montréal, Canada

Professor Dr. Peter Roberts

Faculty of Civil Engineering, University of Liverpool, UK

Professor Dr. Arnold van der Valk

Land Use Planning Chair, Wageningen University, The Netherlands
